Cyclone Visits The Youngstown District

On Monday of last week a cyclone visited the district south of Youngstown and the damage done will run into thousands of dollars. A number of barns, one with a cement foundation, were picked up and carried some distance away and then torn to pieces. Windmills were twisted up and torn from their foundations and fields of grain in the stock were destroyed. Horses were standing in several of the barns and the buildings were lifted up and carried away doing no damage to the animals.—Mail, Drum, helier.

Sell Kerosene Mixture as Gasoline Substitute

Vancouver. A mixture of kerosene and ether went on sale here the other day in several filling stations as a substitute for gasoline. The mixture retails at 30 cents a gallon, but those using it assert there are more power and more miles to the gallon and that it is therefore an economy to use it.

It is said the engine starts as well and runs as smoothly as with the gasoline. Stations offering it have reported large sales.

The regular monthly meeting of the Bindloss Women's Institute, will be held at the home of Mrs. D. Mack, Wednesday, September 15, 1920.

Mark Roads Leading to Various Towns With Signs

A. M. Lowe, representative of the Alberta Auto Sign League was a visitor to town Wednesday. Mr. Lowe secured many memberships here to the League at a cost of \$1.00 per membership. The League's purpose is to mark the roads leading to various towns and centres through the province with signs. About fifty signs will be placed on the Medicine Hat and Brooks roads. A few of the signs will be used in Saskatchewan on the roads leading into Empress.

The purpose of the League is a good one, which will confer much benefit on the travelling public. Messrs. J. Cusack and W. C. Boyd have the placing of the signs in this district.

Designer of Shamrock IV Gives View Regarding Defeat of Challenger

Mr. Charles Nicholson, designer of the Shamrock IV, has arrived in England from America. In an interview with the "Daily Graphic" (London) correspondent, he said: "We were beaten by a faster boat, better organization, and better sailing. We shall have to take over a faster boat before we can bring the cup back, and, owing to the rules of the race, there are many difficulties in the way of doing that, as the members of the New York Yacht Club realize.

The club, no doubt, feels the responsibility of defending the cup, but it is rather sacrificing the improvement of yachting by requiring, because of the conditions prevailing, boats of a somewhat flimsy character. I believe that the club realizes that alterations in the rules are necessary if the race is to be made a true test of yachmanship.

The ideal race would be on an agreed line measurement of rating, with no time allowance. When I designed the Shamrock IV, I had no idea of the

Prov. Crop Report

Since the previous report issued on August 15, harvesting weather has been particularly favorable. The weather has been particularly cool with bright sunshine. This has been ideal for filling and ripening.

Reports from the south and central parts of the Province indicate eighty per cent of the grain cut excluding green feed. Through the northern parts of the Province fifty to sixty per cent of the wheat is cut and the cutting of oats and barley well under way. Light frosts have occurred in various places but no serious damage has been reported up to the time of writing, which practically means all the wheat is past the stage where it can be damaged and the greater portion of oats and barley are sufficiently well advanced to ensure a good sample. There is not sufficient threshing done yet to form an estimate of yields based on actual threshing returns, but the yield will be heavy and the sample good. All districts report plenty of labor, but wages are higher than usual.

Clay Deposits Possess Valuable Properties

Analytical chemists claim that the clay deposits at Willow Bunch and Eastend are proving to possess very valuable properties and are likely to become of great commercial value in the manufacture of bricks, tiles, and fine pottery. The Willow Bunch deposit has shown itself capable of producing highest grade china, equivalent to the Crown Derby ware without the necessity of being manufactured or even filtered. —Standard, Shaunavon.

class of boat that America was going to build, but, taking everything into consideration, I feel that the contest was marked throughout by true sportsmanship.

"The war, no doubt, affected the efficiency of Shamrock's crew, which was out of practice. However, I see no reason why we cannot yet build a boat capable of lifting the cup."

R. M. Henderson's new real estate office and J. A. Toombs' new jewelry store are both worthy of commendation. These business places are well and tastefully appointed.

Where will I Buy my Fall Clothing?

Our big stock of Up-to-the-Minute Men's Wear answers the question.

Receive Less for Wheat

Marketed Across Border

North Portal, Aug. 31.—With the Canadian Wheat Board passing out of existence today, the farmers along the border are deeply interested in the price to be obtained for their 1920 wheat crop.

Last year many of the farmers close to the border, under permit, drew their wheat to the U.S. elevators, receiving from

50 cents to \$1 per bushel more than the set price in Canada, and as a result farmers from inland points were anxious to ship in car lots to the United States, but were not permitted to do so. Now the situation is changed, there being no restrictions on shipping to the United States. But the price today in Canada is higher than in the United States.

The price paid locally today at North Portal, Sask., is \$2.39 for No. 1 Northern, and at Portal, N.D., is \$2.18. However, considering exchange at 10 per cent, and the fact that Canadian wheat will grade one grade higher in the United States, the price is practically the same on both sides of the boundary. If it were not for the discount on Canadian money, North Dakota farmers would today sell to the Canadian elevators. It will be interesting to note which way the movement of Canadian wheat will take as soon as the threshing machines have done their work.

BUTTERFAT

Prices have been maintained at a high level all the summer and it is certain the prices will be very high during the fall and winter. Careful attention to your cows and the maintaining of your cream production will prove very profitable. We offer you excellent service and prompt cash settlement for your shipments.

Baking Quality of

Lower Grades of Flour

With the ever-increasing cost of living, it has become necessary to find corresponding means of saving. The housewife is the person on whom most of the responsibility of economizing rests. The use of some of the cheaper grades of flour instead of the highly expensive first patent is another means of saving that may be added to the already long list. During the war, all members of the community were forced to use government standard flour which was of a lower grade than most people had been accustomed to. Nevertheless, most of the bakers succeeded in furnishing bread so good that few people would have considered it distinctly inferior had it not been for the difference in colour. Too much attention has, however, always been paid to colour in flour and bread. Bread that is really very pale is not so healthful as bread made of somewhat lower grade of flour and the war-time bread was really superior as a food to the extremely white product in use previously. Lower grades of flour somewhat similar to the government standard flour can always be purchased but are not usually in much demand on account of their inferior colour. These second and third grade flours, however, contain a higher percentage of protein and assimilable phosphates. These features are distinctly advantageous.

While the lower grades of flour may require some slight modifications in the baking method in order to produce the best possible bread, these changes are not serious and, as a rule, no difficulty whatever will be experienced in handling such flours. When we consider the lower price of the cheaper grades of flour and their high nutritive value, we see two distinct advantages in using them. The claims made for the whitest flours are nearly always much exaggerated and are sometimes quite absurd, and the public would do well to insist on obtaining the really superior materials which are sold as inferior.

Mail-Order Service

Drug stores should present an attractive appearance when whiskey is displayed upon the shelves of the drug stores in Saskatchewan for this is what will happen under the new Saskatchewan Temperance Act of 1920, when the liquor commission literally "sets its seal" upon bottles of liquor. The old familiar brands, however, will disappear, at least in name, and their places will be taken by liquor made up in 8 oz. bottles which will be sold under prescription with the status of patent medicines. Druggists have already been notified that the commission is preparing a special design of seal which will be placed on all bottles of liquor and is urging the reduction of stocks to lowest possible point in anticipation of the passage of the act.

According to the Mail, Dr. Heller, work on the excavation of a skeleton of the Cretaceous or Horned Quadruped Dinosaurs, previously named Eoceratops, is being conducted by W. E. Cutler, at Steepleville, Alberta. One side of the skeleton is almost intact and also a portion of the other part. Mr. Cutler says that laboratories of large establishments would have no difficulty in restoring such parts by plaster casts tinted to show restoration. The skeleton is a finely preserved specimen. During the winter months 100 cubic yards of rock has been removed; the covering being

over 12 feet in thickness. The skeleton is one of the Red Deer fossils.

Stand Up For the Law

Recent events in Canada, both east and west, point to the necessity of great care being exercised, not so much by the authorities, as by the people in general to safeguard one of the Dominion's finest traditions and at the same time protect the liberties of the citizen.

Canada has long been recognized throughout the world, and especially in the great republic to the south, as a country where law was respected and obeyed, where even-handed justice was administered to high and low, rich and poor alike, and where sooner or later the long arm of the law would get the guilty. In the United States, where so many murderers escape just punishment for their crimes, where the law's delays are almost interminable, and where as a result of a lack of public confidence in the machinery of justice, lynchings are not infrequent, the reputation borne by Canada was an invaluable asset. It is an asset Canada cannot afford to lose, nor allow to be lessened.

A few weeks ago, however, a group of men in southern Saskatchewan took the law into their own hands and drove a law agitator out of the country, threatening him with tar and feathers if he did not leave. On August 16, at Thorold, Ont., a mob stormed the town jail and finally arrested it in an effort to take a prisoner from the officers. The officers in order that they might execute him themselves, although he had not yet been found guilty of the crime of which he was accused, the officers, in common sense and an appeal to British fair play was effective in restraining the passionate mob and before it took the irretrievable step.

People, however, must be on their guard against such exhibitions and acts, if Canada is not to suffer in the eyes of the world, and the liberties of its own people placed in jeopardy. Even in the earlier days when the west was a lawless, woolly, and at the time of the great stampede to the Yukon, law was maintained and respected so effectively as to call forth the admiration of all countries. It is as necessary as ever that it should continue to be maintained. The world has passed through a great war when human life seemed to be the cheapest commodity in the world, and as a result many people do not look upon the value of human life as seriously as of old. But the old conception of the sacredness of human life must be fully re-established, and the duty of all citizens to assist by precept and practice to such restoration, and to oppose by all legitimate means their power anything that tends to weaken and destroy confidence in the law.

The maintenance of law and order is the foundation of any organized state. Without respect for law, and lacking order, society could not exist, all property would not look upon any value, family ties would be dissolved, and human life ultimately be the plaything of the murderer and assassin.

Do away with law, and respect for it—which, of course, would follow the non-enforcement of law—and disorder would reign supreme. All man-made law would revert to only one law—the law of the jungle, the law that might is right and must will prevail.

Every man and woman realizes in their innermost beings that this is true, and that the whole organism on which human society rests has been evolved and erected because of general acceptance of the absolute necessity of a state of law and order. Mob rule is evil and vicious in the highest degree.

The maintenance of order rests absolutely in respect for and the upholding of the law—which, after all, is but the concrete expression of the will of the majority of the people—

is dependent upon respect for and unqualified support of those who are appointed to administer the law, which the people through their elected representatives have enacted for the common good and protection of all.

There can be only one outcome resulting from a loss of public confidence in the administration of justice in this country, and through the acts of the people taking the law into their own hands—law will be superseded by license; anarchy will replace order. Life and property will become playthings of the passions of men, and all those precious liberties and that freedom, to defend and maintain which our heroic soldiers died and suffered in their hundreds of thousands, and which alone can be maintained under a system of law and order, will be destroyed, and a state of disorder and chaos prevail.

Every person who joins in or shares in a mob is undermining the very foundations of that law which is his own safeguard and the protection of his family and his property.

SUMMER HEAT

HARD ON BABY

No season of the year is so dangerous to the life of little ones as the summer. The excessive heat through the little stomach out of order so easily that unless prompt aid is given he is in danger. Summer is the season when diarrhoea, cholera infantum, dysentery and colic are most prevalent. Any of these troubles may be treated by the use of Dr. Williams' Pink Pills for Pale People. During the summer months the best friend is Baby's Own Tablets. They regulate the bowels, soothe the stomach and keep baby healthy. The tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

To Make a Pound of Honey

It is Clear That the 'Busy Bee' is Well Nerved

The Manchester Guardian quotes experts as saying that this is to be a good season for honey, and it adds that many people will welcome the news, though few realize the enormous effort a single pound of honey necessitates on the part of the bees. "In a pound jar," The Guardian explains, "there is the concentrated essence of over 60,000 flowers. It is calculated that to make a pound of clover honey the bees must take nearly 60,000 blossoms and make 475,000 visits in the process. Often the journey from the hive to the flowers and back runs to two miles, so that the making of a pound of honey entails journeys aggregating over 5,000,000 miles. When it is remembered that a single colony of bees will produce from sixty to eighty pounds of honey in a season it is clear that the 'busy bee' is well nerved."

U. S. History at Oxford

From Oxford comes the interesting note that Viscount Rothermere has offered to Oxford University the chancellor, on certain specified conditions, a sum of \$100,000 for the establishment and endowment of a professorship of the history of the United States of America, to be styled the Harold Vyvyan Harmsworth Professor of American History in memory of his son, Capt. the Hon. Harold Vyvyan Harmsworth, M.C., Irish Guards, formerly commander of Christ Church, who was killed in the war.

Black Bask for Lake Nipigon

The south end of Orient Bay on Lake Nipigon, and Keenly Lake, have recently stocked with three hundred parent black bass. The fish were shipped from Toronto in tanks and deposited in the water by Neil McDougall, sportsman representative of the Canadian National railway.

Advocate Tree Planting

Trees of Benefit in Preventing Evaporation in the Stomach

The tree planting car sent to the prairie provinces by the Canadian Forest Association has been stopped for inspection at many of the leading towns and cities. Mr. Archibald Mitchell, who is in charge of the exhibits in the car is advocating shelter belts as a protection against soil drifting and other wind damage. In his opinion ten percent of the country should be under trees to make it fit for habitation.

Questioned as to the method of planting Mr. Mitchell said:

"Strips of wood across each quarter section, running north and south, would go a long way toward solving many of the dry farm problems of the west. Even if the growing of grasses becomes universal, as is proposed, the trees would be of the greatest benefit in retaining the snow in the winter and preventing evaporation in the summer, thereby storing a greater supply of moisture for the growth of the grass."

Mr. Mitchell maintains that the planting of trees is not a difficult job as one man and one team can plant 1,000 trees in a day, that taking 1,000 trees to cover an acre at 4x4, which is work for two men for one day.

"Two acres in two days wouldn't take much time from the wheat planting season," he remarked. "Usually the farmer neglects planting trees because he thinks he cannot spare the time, but the two days taken out of the middle of the wheat seeding period would not be lost, but would simply be taken from the wheat planting season. The small amount of damage incurred by the change through a possible frost is not compared with the advantage to be derived in later years from the trees. Possibly in two or three years the farmer may be thankful that he spent two days to plant them as it is possible the only crop he will have will be that behind the shelter belt."

HAIR SOON TOO

SHORT TO DO UP

A little "Danderine" stops your hair coming out and doubles its beauty

To stop falling hair at once and rid the scalp of every particle of dandruff, get a small bottle of delicate "Danderine" at any drug or toilet counter for a few cents, put a little in your hand and rub it into the scalp. After several applications the hair usually stops falling, and you can't find any dandruff. Help your hair grow strong, thick and become soft, glossy and twice as beautiful and abundant.

"Tell me," said the solicitor for the prosecution, "were you present at the inception of the altercation?" "No, sir," replied the witness, "but I was there when the fight started."—London Tri-bits.

Miller's Worm Powders do not need the after-help of castor oil or any purgatives to complete their thoroughness, because they are found in themselves. One dose of them and they will be found palatable by all children, will end the worm trouble by making the stomach and bowels untenable to the parasites. And not only so, but the powders will be certain to exert most beneficial influences in the digestive organs.

Great Fishing Territory

That the lakes of Northern Saskatchewan are from a fishing point of view the finest in Canada, is the opinion of G. Sigurdson, a fisherman who, with his crew of three caught 80,000 pounds of whitefish in Lake Athabasca last year. It is stated that Buffalo Lake is teeming with fish, and is only one of the many similar lakes of the north. The only difficulty is transportation, and with one railway it is estimated that at least 30 carloads of fish could be brought out of the northern lakes each season.

A \$100,000 crane with a lifting capacity of 2,000,000 pounds is being used at the Philadelphia navy yard. It stands 245 feet high.

The Riksdag has passed legislation looking to the electrification of the entire system of state railroads in Sweden.

W. N. U. 1330

WHY EXPERIMENT?

Food scientists claim that the leavener is largely responsible for the flavor, texture and wholesomeness of your home baking. That on no other one ingredient does so much depend. It is important, therefore, to use a baking powder that you know possesses the necessary leavening qualities.

MAGIC BAKING POWDER

Contains No Alum

and is the only strictly high class baking powder in Canada selling at a moderate price. Its reputation is built on purity and highest quality.

The only well known medium priced baking powder made in Canada that does not contain alum and that has all its ingredients plainly stated on the label.

Made in Canada

150 Year Old Grape Vine

At Hampton Court, London, in one of the greenhouses is the famous vine planted in 1768 by "Capability" Brown, a famous landscape gardener of the eighteenth century. The vine is the Black Hamburg variety. The fruit in recent years has been good, and the number and quality of the bunches is rather above the average. The girth of the stem is five feet at the base. Several years ago the twelve bunches of fruit from the wonderful vine were shown at a Royal Horticultural Society exhibition and the combined weight was 42 pounds.

Mothers can easily know when their children are troubled with worms, and they know the remedy—Mother Graves' Worm Exterminator.

A remarkable bird, found in Mexico is the bee martin, which has a trick of ruffling up the feathers on top of its head into the exact resemblance of a beautiful flower; when a bee comes along to sip the honey from the supposed flower it is snapped up by the bird.

Mindal's Liniment Relieves Garget in Cows

Prof.: What is the meaning of vor tek?

Abey (excitedly): Oh, I know—it's the extra cent on ice cream and movies.

A Real Asthma Relief. Dr. J. D. Kellor's Asthma Remedy has never been advertised by extravagant statements. Its claims are conservative indeed, and are judged by the cure which it performs. "Expect real permanent relief when you buy this remedy, and you will not have cause for disappointment. It gives permanent relief in many cases where other so-called remedies have utterly failed."

Supplies Scarce in Far North

Arrivals from the head of Peely River, 200 miles north of Fort Selkirk, bear word that the stores in that district have been out of supplies for some time. They have not had a grain of sugar since Christmas. The steamer Thistle, however, has just arrived at the head of navigation with ample supplies for the coming winter.

SHORT OF BREATH

Could Hardly Walk

Without Resting.

When you go to a physician to be examined for any respiratory trouble, one of the first questions he asks is: "Are you short of breath?"

Now, when the heart becomes affected, there ensues a feeling of choking, smothering, throbbing, irregular beating, sometimes, dizziness and a weak, sinking, anxious feeling of oppression and anxiety.

On the first sign of the heart becoming weak or the nerves of the strong Milburn's Heart and Nerve Pills are just the remedy you require. They regulate and stimulate the heart, and strengthen and restore the whole nervous system. Mr. Stephen Crouse, Esq. Clifford, N.S., writes: "I suffered for several years with heart trouble. I could hardly walk from the house to the barn without resting as I used to get so short of breath. Doctors could not help me. My wife told me to get a box of Milburn's Heart and Nerve Pills and I felt better after taking them; three boxes made me quite well. I am now helping my son to work the farm, and can truthfully say I feel like a different man."

Price 50c a box at all dealers or mailed direct on receipt of price by The L. Mills & Co. Limited, Toronto, Ont.

British Big Bertha

A Huge Gun With a Range of Eighty Miles

When the freedom of Sheffield was conferred on Earl Beatty, the fact that his super "Big Bertha" was being built at Vickers' works was disclosed by the Lord Mayor. Its length is 80 feet and it can throw an eight-inch shell between seventy and eighty miles. In consequence of the extraordinary high velocity of the projectile, the gun will need re-loading at frequent intervals. An earlier gun of this type was delivered to the government after the signing of the armistice.

Mindal's Liniment Relieves Diarrhoea

Among the Hindus enormous sums are spent on the cremation of the richer classes in sandalwood.

They Scoothe Excited Nerves.—Nervous affections are usually attributable to defective digestion, as the stomach dominates the nerve centres. "Purges" of Parnell's Vegetable Pills will still all disturbances of this character, and by restoring the stomach to normal action relieve the nerves from irritation. There is no sedative like them and in the correction of irregularities of the digestive processes, no preparation has done so effective work as can be testified to by thousands.

The various diamond mines in South Africa yield stones with distinct characteristics that are readily classified as to their origin by experts.

Rebust Vindictive

The British light cruiser Vindictive which was sunk in the entrance of Oostend harbor on May 11, 1918, and which has bloated that port since that time, has been refloated and the port is again open for traffic. The sinking of the Vindictive was one of the most thrilling events of the last year of the war.

MOTHER!

"California Syrup of Figs" Child's Best Laxative

Accept "California" Syrup of Figs only—look for the name California on the package, then you are sure your child is having the best and most harmless physic for the little stomach, liver and bowels. Children love its fruity taste. Full directions on each bottle. You must say "California."

It is said that eating onions will prevent a miscarriage from coming on a woman's lips.

Waste is a Crime These Days

SAVE

Those High-priced MACHINES

An unprotected house has only a working life of 100 days—and it is with all other machines. An actual depreciation of 15 to 25% when left to the weather. When housed properly the depreciation is reduced to the ordinary wear and tear caused by the work—3 to 10%.

BUILD NOW

See the many plans for up-to-date implement houses at your nearest lumber dealer. He is fully equipped to render every assistance in the planning of your buildings. He has plans, working drawings, full particulars. His assistance is free. Most dealers have a splendid book of 100 pages on "Better Buildings," of which they'll be pleased to let you have a copy. Go and see him now.

This Announcement is issued by the Lumber Manufacturers of Canada.

There's no waste to Grape-Nuts and it saves sugar, for it contains its own sweetening

No cooking is necessary and the likable flavor of this wheat and malted barley food is equaled only by its economy.

Grocers everywhere sell Grape-Nuts.

Better Farming Train Is An Agricultural College on Wheels

"If the people can't come to the University, then send the University to the people!" This seems to be the reasoning of the University of Saskatchewan in stocking up well over 12 cars which form the Better Farming Train, and which have been referred to as "an agricultural college on wheels."

During the six weeks that the Train was on tour this summer throughout the province no less than 62 towns were visited, as well over a quarter of a million people passed through the cars. Many had driven from 20 to 30 miles to town for the lecture. One man who had come in thirty miles to see the purebred sheep and make inquiries about that subject.

At each of the towns visited along the lines of the C.P.R. and C.N.R., large and eager crowds listened to the lectures, studied the exhibits, asked all kinds of questions, and went away well stocked with information and bulletins.

Let us picture a family at the train. Mrs. K., who is Henry K. (aged 18), Jack and Mary K. (aged 12) and Baby K. (aged 2). The K's are not very prosperous farmers, are in fact only just about making ends meet. They have not been able to afford a car, so the wagon has to take the family the 12 miles to the train.

At ten o'clock when they arrived, and already a goodly crowd has gathered around the stock cars, and the K's are ushered into the introductory talk by a railway official. He is explaining that the train is a co-operative project, the railway company, the lecturers and the University of Saskatchewan, and the bulletins and a few of the staff from the departments of education and agriculture. The official points out that the railway company considers the expense justified, since their property and that of the whole country depends ultimately upon the health or otherwise of the agriculture.

Mr. and Mrs. K. and their family have by this time arrived at the edge of the crowd. Young Jack and Mary are ushered into the stock cars, where stores of little folk are gathered. They are shown in turn a fine specimen of an Aberdeen Angus, a Shorthorn, an Ayrshire, a Holstein and a Hereford and learn how to judge the class and quality of the various animals. Although the talk is in English, not the men on the outside of the crowd seem just as interested.

In among the children can be seen three of their teachers, who have come from the country with their pupils. Two of these are university undergraduates and their delight is keen at receiving their first glimpse of the train. The University, who is the mother of the province, in reaching forth this long arm (the train) has recognized her debt to the country to the educational needs of the country districts.

One of the ladies teaches a school of little dark-skinned Gaiques and there (with Jack and Mary) they stand, all very vigilant and shy. As yet they speak little English, but their understanding between them and their teacher grows better every day. They wait on her looks as on those of a queen. The other undergraduate teacher has brought her children some eight miles from the country in three wagons. She has no less than 120 children, and she is a teacher at the school, has this teacher, who by the way, at the university is a brilliant student of English.

Meanwhile Mrs. K., together with all the womenfolk and babies with her, are conducted to the Household Science car. At the latter Mrs. K. leaves her baby, as do the other mothers; for there are three gentle ladies manning the nursery. The children stand, pile bricks and rattles and balls under the plate a veritable children's paradise. Baby K. can be assured of the time of her life.

While young Jack and Mary, with their father and other brother, are listening to the livestock talk, and baby is literally kicking up his heels in the nursery, the mother is comfortably seated and listening to a lecture by a qualified nurse on the subject of school and home hygiene.

Some pointed things are said by the nurse on the subject of child welfare and Mrs. K. decides that she will purchase in town that day shall include a couple of toothbrushes (for Jack and Mary).

The nurse is succeeded on the platform by a graduate in Household

Science, who gives a practical demonstration of better home cooking. Mrs. K. had thought she had nothing to learn in this respect. After a short lecture on dairying and poultry by University professors, Mrs. K. makes a point of securing some of the admirable bulletins on the lecture subjects.

The talk to children on livestock has long since ended and Jack and Mary, with the other 200 or so youngsters, are taken down to the Boys and Girls' Lantern Car, there to listen to a talk on the bird life of the province, illustrated by beautifully colored lantern slides. The children are then taken to the gramophone representations of bird songs, with the birds shown on the screen.

It is happening to Mr. K. and his grown up son during this while? They are enjoying a talk by an expert stockman from the University on the subject of sheep and hogs. Excellent material is at hand from the University farm for purposes of demonstration. The lecturer makes a good point of what can be done at a short time by the use of purchased stores. That is the burden of his talk—the importance of a good sire. He points out that a good sire, what a good sire meant to his constitution.

Mr. K., mindful of his bunch of scrappy cattle, makes a resolve to turn his own further dealings with either scrappy stallions or bulls. After this talk father and son part company, the former to hear a talk on the subject of the importance of the farm mechanics section. Mr. K. learns a good deal on the subject of choice of crops, tillage methods, in short, how to get the very best out of his particular farm. The more Mr. K. sees of the train the more he realizes that he has been wrong. He classifies himself as a poor farmer. He appreciates the observation that while any fool can farm, it takes a head to be a good farmer. He knows his own methods had been more intensive.

Henry K.—meanwhile has got into a little, a little heaven. His knowledge of motor machinery is not very extensive, but it subjects fascinate him. The speaker explains everything from the lighting and pumping systems to the working of the Ford engine.

The entry of a second demonstrator, an equally pleasant surprise for Henry K., for he recognizes one of his best schoolboy chums, and it is not long before the two are in conversation. Conversation reveals the fact that Henry's friend has spent the last two winters at the University of Saskatchewan, attending the agricultural college. This, of course, explains his knowledge of farm matters. As the demonstrator tells of his experiences at the College of Agriculture at Saskatoon, Henry cannot help feeling a little jealous; an when the friend suggests the possibility of Henry's coming to the University for six months in the winter, the idea fills the lad with a great desire. What a place, thinks he, the University must be, when its mistress of it (the train) is so good. The demonstrator introduces Henry to the Professor of Engineering in the University, the professors of Field Husbandry and Animal Husbandry, and Henry, who had always thought of the University as a place where "good fellows" were not at all "high and mighty."

During the time Mrs. K. has not been idle, for the exhibits of the train, and in particular the fine specimens of poultry, have proven very interesting. She has been shown how to candle eggs and given many a tip in the proper care of the birds. On the subject of incubators Mrs. K. has learnt a great deal, and she is now a splendid specimen of poultry from the University farm.

Young Jack and Mary, having had a specially conducted tour of the whole train, are now back in Boys' and Girls' Car enjoying the moving pictures. As Mr. K. passes by the lantern car, he is struck by the splendid laughter from the Lantern Car, where a comic film is rounding off those on wild bird life. Mrs. K. is also interested in the mechanical section car, and Henry requests his friend the demonstrator to show them the steam engine and the working machine run by electricity, also the auto-

matic pumping outfit. Young Henry is determined that before long they will have something like this on their farm or he'll know the reason why. Mr. K., who has many new ideas regarding seed, tillage, stock and implements, feels reasonably confident that with the application of these ideas better days are ahead of them.

It is time to go home. The mother goes to receive her baby, whom she finds happy enough among the pillows. It has been a splendid relief to be free of that chubby infant for a few hours. Mr. K. and Mary have secured the team from the barn and having placed the bulletins which each has secured in a safe place, the family sets out for the farm. Jack and Mary are full of the pictures they have seen, the talks and the free cinema. Mrs. K., who has not failed to secure the greatest knowledge of the subjects of household science, poultry and dairying.

Mr. K. and his son Henry sit in the front seat and talk the whole way home on the subject of better farming. Henry has had a grand opportunity to broach the subject of his attendance at the University in the winter, but if we know anything of Mr. K. it is safe to say that he will be there.

Trying to Keep Coal in Germany

Wealthy German Hopes to Reduce
Stinnes Industrially

Hugo Stinnes, the German who is leading the fight to keep as much coal as possible in his own hands and to escape with sending as little as possible to France, under the terms of the treaty, frankly admits that he believes that if Germany keeps this coal, in five years' time France will have fallen far behind the world's race of commerce. Without coal France will be unable to develop her iron industry and will have to turn her eye over to Germany, he believes, and then Germany will be in a position to become as strong commercially as she was before the war.

Stinnes is nearly fifty years old, a native of the Rhineland province, but looks only about forty. He is one of the richest men in Germany and is reported to have earned 15,000 of his own money in the Ruhr district. He is a candidate for election to the Reichstag, and his election is considered a certainty. He started his business career by dealing in coal and iron. He has fallen far behind the world's race of commerce. He is reported to have earned 15,000 of his own money in the Ruhr district. He is a candidate for election to the Reichstag, and his election is considered a certainty. He started his business career by dealing in coal and iron. He has fallen far behind the world's race of commerce.

An All-Veteran Factory Will be Owned, Managed, and Operated by Returned Veterans

Incidentally and apparently with no thought of being a symbol of the historic past, there will soon be in operation in New York City, Brooklyn, and Columbia, a factory for the making of cordage and twine, that is also a striking memorial of the war. The enterprise, the Canada Veterans Cordage Co., Limited, is what might be called an all-veteran concern. Its factory will be owned, managed and operated entirely by veterans; and the enterprise is to be conducted on a strictly co-operative, profit-sharing basis. In starting the company, the veterans subscribed \$60,000 of paid up capital, with \$40,000 additional which will be available if needed, and borrowed from the Federal Reserve Bank. Provisional Government under the act for industrial development. One hundred thousand dollars has been spent in the United States for the factory, the factory is nearly finished, and is expected to be running to its full capacity by autumn. What is equally interesting is that the new factory will be in a strategic position in the matter of raw material and freight transportation, so as to be able to take full advantage throughout British Columbia, the provinces of Manitoba, Saskatchewan and Alberta. The British Columbia section of the factory will be a good deal of the weight of rope a year, a good deal of which has been imported, so the outlook for the all-veteran cordage company is pleasantly promising.

Washed With Care Mr. Newlove—"This lettuce tastes best—did you wash it?"

Mrs. Newlove—"Oh, yes, I did, darling—and I used perfume, soap, and water."

Flue lace and strong ropes can be made from some species of nettle.

Return of The Buffalo

Numbers Are Rapidly Increasing in Government Reservations

That the number of bison—the American buffalo, is increasing, and that the animal may have a future in supplying food to the people at least a part of the continent is suggested in a pamphlet on "The Coming Back of the Bison," by Mr. Gordon Hewitt, consulting zoologist of the Commission of Conservation. The tales told of the abundance of this animal on the western plains are extraordinary as to suggest exaggeration. Among others, Dr. W. T. Hornaday, director of the New York zoological park, has contributed to the general knowledge of the greatest native American quadruped. Once common as far east as the state of New York, it still ranges across the western plains. It travelled as far north as the Great Slave Lake in Northern Canada and as far south as Texas and northeastern Mexico. The Indians found the bison a source of food and clothing and killed without thought of anything but the necessities of life. The white man took the chase, however, as a matter of money-making, that the doors that most of these young Robes of buffalo hide were cheap and comfortable for winter travel, and throughout much of the eastern states and Canada every owner of a horse had one or two. The winter drives of the police in western cities were included a bison overcoat. The Indians first saw the danger of the slaughter and when they had the power, sought to forbid white hunters from pursuing the bison.

George Catlin, the great authority on the western Indians, in 1840 thought, from the number of robes, that the slaughter of the bison must have been from two to three million a year. In 1866 the construction of the Union Pacific Railway crossing the continent brought in new numbers of hunters and separated the once great herd into two. The southern herd, thought to contain some three million animals, had practically ceased to exist in 1875. The northern herd survived till 1883, but the slaughter of the bison from Dakota in 1884. Never, says Mr. Hornaday, was the destruction of an animal so completely brought about as by 1889 there were left of the United States and Canada, it was estimated, between 1,500 and 1,600 animals, some in captivity, some in the wild.

Some of the bison were left in northern Canada running wild. Both the Canadian and U. S. governments have taken steps to protect the bison from extinction. In 1907, on the action of Hon. Frank Oliver, the Canadian government bought a private herd in the United States and had it removed to Wainwright, Alta., where a reservation of about 160 square miles was established. The original herd was some 750 in number; in 1918 it had increased to 3,700. In the United States at the beginning of last year there were protected on wild about 3,100 head. The records suggest that much greater increase may be had. If there is a purpose to be served. The bison in its native territory is a hardy; it is a source of supply of food, buffalo beef being palatable and sustaining. There is much territory on which it can live that is not agriculturally profitable. The question is would buffalo do better than the range cattle and make more money for their owners or hunters? The matter will be decided on economic considerations. Meantime the story told of the destruction and the beginning of the coming back has more than temporary interest.—Montreal Gazette.

A Discredit to Seamanship Indescribable Condition of the German Fleet When Surrendered

Rear-Admiral William S. Sims, in the "World's Work" tells of the indescribable condition of the German fleet when surrendered. "The condition of the interned ships, after their German custodians had left, was really appalling. The big ships, they reflected great discredit upon German seamanship, for it would have been impossible for any other nation really to have permitted them to deteriorate as had the German vessels and to become such cesspools of filth.

"For three years the Germans had evidently made no attempt to clean them; the sanitary conditions were so bad that our workmen could not sleep on board, but had to have sleeping quarters near the decks; they spent weeks scrubbing, scraping, and disinfecting, in order to make the ships suitable habitations for human beings."

Community Centres As A Remedy For Shortage of Farm Help

As a remedy for the shortage of farm help, it is suggested that community centres be established where the farmer, his family and the farm help can enjoy sports and games such as do the employees of the big commercial concerns in the large cities. Contentment with one's environment is one of the chief factors in making for increased production, be it of the farm or the factory, says C. Forrest Luby, who claims that the farmers of the United States are facing a critical situation in the existing labor problem. Incidentally he gives Prof. C. Atkinson, of the National Grange, as authority for the statement that only one percent of the boys of the United States who left the farms to join in war service have returned to take up production on the soil; the other ninety-nine percent, having been attracted to the cities by the many things in the way of recreation and amusement provided in the large centers of population.

It is pointed out that most of these young farmers who enlisted for the war had never before been away from their own home towns, and that the war unsettled them. This might have been expected. But what may also be expected is, that when they have had a few years of city life they will be glad enough to go back to the farm and stay there, even without the attraction of specially provided forms of entertainment as an added attraction to country life. In fact, it would appear as though the best preparation for a life on the home farm would be a course of travel—without expenses provided. This and a little reading

Increased Divorce List in Chicago

Believe Divorces Will Equal Marriages in 30 Years

If the present rate of increase of divorces over marriages continues, Chicago by 1950 will be a city of wrecked homes, according to William F. McDermott, of Chicago. "Last year," said McDermott, "there were 37,582 marriages and between 20,000 and 25,000 divorces. This represents an increase of 20 percent since 1912. Three decades more will see the number of divorces equaling the number of marriages.

"A study of the fundamental trouble shows that 3,577 suits filed in 1914 only seventy owned their own homes. In 1914 cases there were no children.

"Increasing childlessness, the growth of the apartment habit and the tendency towards ease, indolence and fast living only presage more broken homes and greater menace to the future of America."

Gasoline Rationing High Prices Will Compel Economy In Using Gasoline

Gasoline producers in the United States have had before Washington officials plans for rationing gasoline. They have had in hand a great campaign to educate the public regarding the growing scarcity of petroleum products. The Standard Oil officials contend that high gasoline prices will compel consumers, because it will compel economy in using gasoline. But that is a one-sided argument, because the forced economy will fall on the humble owner who now is the one doing the consuming, and let the big auto owner of gasoline continue his joy-riding. It is pointed out, however, that in the United States and Canada, the standard oil companies, which sell 12 or 15 miles to the gallon, while nearly all the English cars will travel from 22 to 25 miles. Gasoline has been rationed in England, and car makers will have to hunt much more keenly for gasoline-saving devices, and concentrate on light-weight cars. Some of the old armored battle-ships on wheels that are still doing duty ought to be put out of business, for on gasoline they are really a waste of money. If gasoline rationing becomes effective, it should be applied first to the big cars, and then to the light cars, and then the joy-riders should be checked.—Mail and Empire.

The United States has one telephone instrument to every eight inhabitants.

In proportion to its size a bice is 30 times as strong as a horse.

W. N. U. 1330

would do wonders in making the farm boy contented with his lot; and the means leading to this course of action is a doubtless a liberal education in the schools.

Another plan in providing contented farm help is the farmer who shows a live interest in the well-being of his hired men. The farmer who would keep his help must work with them, treating them as equals and encouraging their interest in community undertakings. As a leader-up to community interest, farm interest must first, however, and the first endeavor of the farmer/employee would be to have his men not only to be encouraged to think ahead in periods of a few years, and they will be content to stay with the farming game for the sake of the opportunity it affords. As for sports, pastimes and recreations, these can easily be found on the farm itself or in the community, with special provision being made by a committee appointed for the purpose. Where the members of the community are so actively involved in a leader in local undertakings for entertainment will undoubtedly be found, even among the young people, and they will be willing to follow the leader.

In Canada, where there is land for all to work intelligently at the producing of crops, there is no need for any undesirable farm worker being discouraged of attaining to ownership of a farm within a reasonable period. Farm workers have only to be encouraged to think ahead in periods of a few years, and they will be content to stay with the farming game for the sake of the opportunity it affords. As for sports, pastimes and recreations, these can easily be found on the farm itself or in the community, with special provision being made by a committee appointed for the purpose. Where the members of the community are so actively involved in a leader in local undertakings for entertainment will undoubtedly be found, even among the young people, and they will be willing to follow the leader.

New Paper Mill At Fort William

First Bond Turned by Lord Bunsenham Imperial Press Delegate

The first bond on the site of the paper mill of the Fort William pulp and paper company by Lord Bunsenham, proprietor of the London Daily Express, was turned at the visit of the Imperial Press Conference, overseas and Canadian delegates. A crowd of local people gathered to see the ceremony and cheered the turning of the first sod.

Lord Bunsenham said that it was a historic-making event. Paper manufacturing in the mill would probably go a long way to meet local needs and with the extension project, the mill would be a great asset to the region. Even trans-Pacific countries with newspaper paper. It was one more link in the chain of industry which helped to build the empire.

Huns Making Reparation German Government Prepares to Hand Over Boats to Allies

The German government is taking over 24 ships aggregating more than 195,000 gross tons, under construction in various private shipyards of the country, for delivery to the Reparations Committee as provided by the terms of the Treaty of Versailles. Five of the vessels were ordered by the Hamburg-American line, one of 26,000 gross tons and another 29,000 gross tons was being built for the German Lloyd.

The Creed of Happiness Get up right in the morning. Go to bed right at night. Start with joy in your heart, hope in the future, and a word of cheer to a kind friend.

If it is a dark day, never mind; you will brighten it up. If it is a bright day, you will fill it to the brightness. Give a word of cheer to a kind friend and a warm handshake to your friends. If you have enemies, look up, pass them by, and forget and try to forget.

All of us would only think how much of human happiness is made by one's attitude. There would be less of human misery.

If all of us would bear in mind that happiness is from within and not from without, we would be a well-spring of joy in every heart and the sun would shine for every try. It is

Wheat No 1, Nor.	2.37	No. 2,	No. 3,
Flax	3.07	Oats	.67
Barley		Rye	1.80

Mrs J. P. Lawcock is visiting at the Sturgeon farm this week.

The total attendance of pupils on the opening day at the local school, for the present term was 117.

Miss E. Brown was indisposed today and was unable to teach her pupils at the local school.

S. E. Peters and Son have had the front of their men's furnishings store repainted, giving the store a clean and refreshing appearance.

A number of Empress young folks visited Leader, Labor Day to engage in tennis contests with members of the Leader club.

Miss Della Trail, returned on Friday, and is spending a month's holiday at the home of her parents.

Miss Eva Dawdy, left on Saturday for Edmonton, to finish her education in a ladies' college there.

Mrs. H. B. Hall, and family, returned on Friday last from Vancouver, where they have been spending their vacation.

Mrs. J. Mackie and her daughter, Vera, returned on Wednesday night's train from the east.

Miss Gladys Stewart returned on Monday, from Calgary, where she has been visiting her sister, Miss Bernice Stewart.

The senior intermediate grades have been unable to commence their studies, as no teacher has at present arrived to teach them. It is hoped that a teacher will be secured by next week.

Wm. Hawkins, of Gowan, Sask. is spending a two weeks vacation, here. "Bill" has a farm in the Social Plains district and was a former resident there. He also was a blacksmith at the Alberta Machine Shop for a short period.

A party of ten local men went hunting last Monday and Tuesday. They went south-east of Alton to McGellan's and Hay's lease, bringing back a total of 26 ducks. They report that the ducks were very plentiful. The only man who did not miss a shot was N. S. King, of the Bank of Commerce.

Danny O'Kane, of Calgary, was a visitor to town on Saturday, renewing old acquaintanceship with his friends here. Dan has been for man in charge of a grading outfit on the C.N.R. Gravelbourg line. He reports they were forced to close down their work the men quitting the grading work for the better pay to be earned in the harvest fields. Like other large employers of labor the present unrest that seems existent in labor circles throughout the world is a matter of much concern to railway grading contractors.

Copy for changes of advt. brought into this office after noon on Mondays of each week will POSTALY not be taken notice of until the following week, unless other arrangements happen to be made with the publishers.

Local duck shooters were out in strong force on September 1st and again on Labor Day. From reports the sportsmen secured fair bags of game.

Mrs. A. C. McEwen and son, Richard, who have been visiting here during the past few weeks, left for their home at Medicine Hat, the first of the week.

To my many Customers: I have decided to discontinue business here in Empress. I beg to thank my many customers for their patronage during my short stay in this town.

R. M. Kirtpatrick.

Recent dispatches from England mention General Lord Byng as the most likely successor to the Duke of Devonshire as Governor-General of Canada.

CASE

KEROSENE TRACTORS
SAVE YOUR HORSES

WALKING over plowed ground all day tires your team as well as the driver. How about pulling a load besides? In these days of scarcity of horses and men prove the heavy farm work such as discing can be done most speedily and economically with a Case Kerosene Tractor. The 10-18 or smallest Case Tractor can pull an 8 ft. double action disc harrow set to full depth. Best farmers can work the "iron horse" day and night if necessary. Don't forget that Case tractors operate over dusty fields without dust entering cylinders. The Air washer fully protects the Motor. The all cut steel spur gears are fully enclosed and run in oil. The weight of the Case 10-18 is only about 3,400 lbs. this, with the liberal sized discs prevents soil packing. Other important features explained in full descriptive literature sent out for the asking. Let us tell you more about the 10-18 or larger Case Tractors.

You Can Depend On It

EVERY drop of Imperial Polarine is 100% lubrication. It spreads a protecting cushion of oil between all wearing parts, making each part function smoothly and reducing wear to a minimum.

It has exactly the right body—forms a perfect piston-to-cylinder seal, maintains compression, conserves power and saves fuel. It does not break down or run thin under extreme heat.

Imperial Polarine burns clean, reduces carbon deposits to a minimum and assures long life, smooth running and reliability to your motor at all times, under all conditions.

There is an Imperial Polarine grade for every motor need, from crank shaft to differential. Consult the Imperial Polarine Chart of Recommendations for the correct grade to use in your car—it is on display wherever Imperial Polarine is sold.

Sold in one and four gallon sealed cans, steel kegs, half-barrels and barrels, by dealers everywhere in Canada. Buy in large containers and save money.
